

Setting ANTI-SPAM Config services

You are about to install patch_nc_4.6.25, then please read this entire tutorial before starting the installation:

- 1 - Install patch_nc_4.6.25 as a regular patch.
- 2 - Immediately after installation, you must revalidate the configuration pages.
We will focus on the Config Services page for ANTI-SPAM (bottom of page)

When you see this part:

ANTI-SPAM

• Maximum number of memorized code (> 50)	<input type="text" value="50"/>
• Period of validity of a code in minutes (> 10)	<input type="text" value="10"/>
• Give another name to the following scripts (without .php):	
- in replacement of postguest.php :	<input type="text" value="servepege"/>
- in replacement of blogs.php :	<input type="text" value="cahiers"/>
- in replacement of blog.php :	<input type="text" value="brouillon"/>
- in replacement of forum.php :	<input type="text" value="saloons"/>
- in replacement of fortopic.php :	<input type="text" value="toforcip"/>
- in replacement of thread.php :	<input type="text" value="desmos"/>
- in replacement of guestbk.php :	<input type="text" value="vrelirode"/>
- in replacement of news.php :	<input type="text" value="fdechoux"/>
- in replacement of user.php :	<input type="text" value="membusr"/>
- in replacement of newsletter.php :	<input type="text" value="erttelofin"/>
- in replacement of download.php :	<input type="text"/>

Then please go straight down to the bottom of the page to click "Save config".
Attention ! Bold type and yellow background are there just to show you what is being done.

These four files renamed, we jump to footer and click "Save config".

- 3 - You should now have in all fields the original names of the files, as shown in this screenshot:

ANTI-SPAM

- Maximum number of memorized code (> 50)
- Period of validity of a code in minutes (> 10)
- Give another name to the following scripts (without .php):
 - in replacement of postguest.php :
 - in replacement of blogs.php :
 - in replacement of blog.php :
 - in replacement of forum.php :
 - in replacement of fortopic.php :
 - in replacement of thread.php :
 - in replacement of guestbk.php :
 - in replacement of news.php :
 - in replacement of user.php :
 - in replacement of newsletter.php :
 - in replacement of download.php :

Now, you must rename «download » into a custom name you choose.

Renaming will affect referencing downmloads on your site.

Once file « download » has been renamed, we jump to footer and click "Save config".

And you should see the name you have chosen to replace « download » like on this screenshot.

ANTI-SPAM

- Maximum number of memorized code (> 50)
- Period of validity of a code in minutes (> 10)
- Give another name to the following scripts (without .php):
 - in replacement of postguest.php :
 - in replacement of blogs.php :
 - in replacement of blog.php :
 - in replacement of forum.php :
 - in replacement of fortopic.php :
 - in replacement of thread.php :
 - in replacement of guestbk.php :
 - in replacement of news.php :
 - in replacement of user.php :
 - in replacement of newsletter.php :
 - in replacement of download.php :

The ANTI-SPAM Services Config configuration is now complete, so you can re-enable the other pages of config.

As far as patch_nc_4.6.25 installation is concerned, configuration is over, and you are ready to upgrade plugins and forks.

You are about to install patch_nc_4.6.24, or cumulative patch 4.6.25 or 4.6.25 GuppY pack, then please read this entire tutorial before starting the installation:

- 1 - You install a patch as a regular patch.
- 2 - Immediately after installation, you must revalidate the configuration pages.
We will focus on the Config Services page for ANTI-SPAM (bottom of page)

When you see this part:

ANTI-SPAM

• Maximum number of memorized code (> 50)	<input type="text" value="50"/>
• Period of validity of a code in minutes (> 10)	<input type="text" value="10"/>
• Give another name to the following scripts (without .php):	
- in replacement of postguest.php :	<input type="text"/>
- in replacement of blogs.php :	<input type="text"/>
- in replacement of blog.php :	<input type="text"/>
- in replacement of forum.php :	<input type="text"/>
- in replacement of fortopic.php :	<input type="text"/>
- in replacement of thread.php :	<input type="text"/>
- in replacement of guestbk.php :	<input type="text"/>
- in replacement of news.php :	<input type="text"/>
- in replacement of user.php :	<input type="text"/>
- in replacement of newsletter.php :	<input type="text"/>

Then please go straight down to the bottom of the page to click "Save config".

This is the first thing to do before you change anything.

For cumulative patch 4.6.25 and GuppY pack 4.6.25, you miss :
in replacement of download.php : (please refer to screenshots of patch_nc_ 4.6.25 installation).

- 3 - You should now have in all fields the original names of the files, as shown in this screenshot:

ANTI-SPAM

- Maximum number of memorized code (> 50)
- Period of validity of a code in minutes (> 10)
- Give another name to the following scripts (without .php):
 - in replacement of postguest.php :
 - in replacement of blogs.php :
 - in replacement of blog.php :
 - in replacement of forum.php :
 - in replacement of fortopic.php :
 - in replacement of thread.php :
 - in replacement of guestbk.php :
 - in replacement of news.php :
 - in replacement of user.php :
 - in replacement of newsletter.php :

You can check: those are indeed the original names of the files that are at the root of GuppyY

Now we will start renaming files, especially not to postguest1 or postguest007 or toto01 or titi02, but with custom names.

It's up to you to find original names that spambots will seek in vain!

- 4 - Let's move to renaming files according to the advice of the Guppy Team:

- *Renaming files postguest.php, user.php and newsletter.php to a custom name for each site, is in our opinion, essential.*

- *Renaming guestbk.php also owing to the number of requests to the guestbook, even if it has an impact on the ranking of the guestbook.*

In this screenshot, are renowned postguest, user, newsletter and guestbk:

ANTI-SPAM

• Maximum number of memorized code (> 50)	<input type="text" value="50"/>
• Period of validity of a code in minutes (> 10)	<input type="text" value="10"/>
• Give another name to the following scripts (without .php):	
- in replacement of postguest.php :	<input type="text" value="servepege"/>
- in replacement of blogs.php :	<input type="text" value="blogs"/>
- in replacement of blog.php :	<input type="text" value="blog"/>
- in replacement of forum.php :	<input type="text" value="forum"/>
- in replacement of fortopic.php :	<input type="text" value="fortopic"/>
- in replacement of thread.php :	<input type="text" value="thread"/>
- in replacement of guestbk.php :	<input type="text" value="vrelirode"/>
- in replacement of news.php :	<input type="text" value="news"/>
- in replacement of user.php :	<input type="text" value="membusr"/>
- in replacement of newsletter.php :	<input type="text" value="erttelofin"/>

Attention ! Bold type and yellow background are there just to show you what is being done. These four files renamed, we jump to footer and click "Save config".

Finally we will take care of the remaining six files.

- 5 - For these 6 files:

- Renaming *blogs.php*, *blog.php*, *forum.php*, *fortopic.php*, *thread.php*, and *news.php* can be at the discretion of the webmaster or according to calls on the website because the impact on SEO is much more important.

Indeed, by replacing the names of these files, SEO will be changed completely, but we come up with this idea to deal immediately with attacks in many queries on these files.

We are still in Config Services ANTI-SPAM with this screenshot:

ANTI-SPAM

• Maximum number of memorized code (> 50)	<input type="text" value="50"/>
• Period of validity of a code in minutes (> 10)	<input type="text" value="10"/>
• Give another name to the following scripts (without .php):	
- in replacement of postguest.php :	<input type="text" value="servepege"/>
- in replacement of blogs.php :	<input type="text" value="cahiers"/>
- in replacement of blog.php :	<input type="text" value="brouillon"/>
- in replacement of forum.php :	<input type="text" value="saloons"/>
- in replacement of fortopic.php :	<input type="text" value="toforcip"/>
- in replacement of thread.php :	<input type="text" value="desmos"/>
- in replacement of guestbk.php :	<input type="text" value="vrelirode"/>
- in replacement of news.php :	<input type="text" value="fdechoux"/>
- in replacement of user.php :	<input type="text" value="membusr"/>
- in replacement of newsletter.php :	<input type="text" value="erttelofin"/>

Still at the bottom of page, click on "Save config".

The ANTI-SPAM Services Config configuration is now complete, so you can re-enable the other pages of config.

- 6 - If it is the pack Guppy 4.6.25 you are installing, thank you for choosing GuppyY for your website.

As you start a website, setup is much simpler, please rename all files with custom names for all files, as in this screenshot:

ANTI-SPAM

• Maximum number of memorized code (> 50)	<input type="text" value="50"/>
• Period of validity of a code in minutes (> 10)	<input type="text" value="10"/>
• Give another name to the following scripts (without .php):	
- in replacement of postguest.php :	<input type="text" value="servepege"/>
- in replacement of blogs.php :	<input type="text" value="cahiers"/>
- in replacement of blog.php :	<input type="text" value="brouillon"/>
- in replacement of forum.php :	<input type="text" value="saloons"/>
- in replacement of fortopic.php :	<input type="text" value="toforcip"/>
- in replacement of thread.php :	<input type="text" value="desmos"/>
- in replacement of guestbk.php :	<input type="text" value="vrelirode"/>
- in replacement of news.php :	<input type="text" value="fdechoux"/>
- in replacement of user.php :	<input type="text" value="membusr"/>
- in replacement of newsletter.php :	<input type="text" value="erttelofin"/>

Do not use the names of this example, but your own custom names.
And again at the bottom of page, click "Save config".

Now do not forget to set your Guppy for best conditions of use. Reading the manual, the tutorials, and the FAQ freeguppy is highly recommended.

- 7 - Later, if you want to revert to original names, nothing's more simple: just empty the desired fields.

ANTI-SPAM

- Maximum number of memorized code (> 50)
- Period of validity of a code in minutes (> 10)
- Give another name to the following scripts (without .php):
 - in replacement of postguest.php :
 - in replacement of blogs.php :
 - in replacement of blog.php :
 - in replacement of forum.php :
 - in replacement of fortopic.php :
 - in replacement of thread.php :
 - in replacement of guestbk.php :
 - in replacement of news.php :
 - in replacement of user.php :
 - in replacement of newsletter.php :

And still at the bottom of page, click "Save config".
